Tankatite[®]

440

Product success: Tankatite[®] 440 specified for tank lid sealing

The customer reported that the lid packing they were using from another supplier was leaking and not sealing properly. Under investigation, it was determined that the lid packing section was too thin, so that the lid landed on the mounting of the threaded ends and could not go further down. As a result the packing was not compressed enough to seal properly. The problem has been solved by supplying the customer with a proper section size of Tankatite 440 lid packing.

- Application: Tank lid
- Replaced: 35 mm lid packing
- Dimensions: OD 770 / ID 690 / H 40 mm
- Supplied: Tankatite 440, 40 x 40 x 2340 mm
